Education

Stony Brook University Stony Brook, New York

B.S. in Computer Science Expected Graduation: May 2026

- GPA: **3.74/4.0**, Dean's list 5 semesters
- **Specialization: Artificial Intelligence and Data Science**
- **Relevant Coursework:** Natural Language Processing, Fundamentals of Computer Vision, Statistical Methods for Data Science, Computational Geometry

Technical Skills

- **Programming Languages:** C, Java, Python, Javascript, Typescript
- **Web Technologies:** HTML, CSS
- **Frameworks:** React, Node.js, Apollo, Phoenix (Elixir), GraphQL
- **ML / AI:** TensorFlow, PyTorch, OpenCV, Hugging Face Transformers
- **Databases:** PostgreSQL
- **Developer Tools:** Git, VS Code, Visual Studio, PyCharm, IntelliJ, Google Colab, Cursor, IPE

Projects

Stock Price Prediction System

January 2026 - February 2026

- Architect a multi-agent data pipeline that integrates **real-time market data and 10+ external APIs**, handling data collection, caching, and validation
- Engineer configurable data collection (1h interval, 1y price history, 30-day rolling news window) to support rapid experimentation
- **Supports up to 10,000+ news articles** (10 sources × 1000 max articles)
- **Organized data processing, feature engineering, and modeling into modular components** for easier maintenance and extension

Experimental AI Cognitive System

July 2025 - February 2026

- Research prototype **simulating consciousness using cognitive architectures** and psychoanalysis with LLM-inspired components: 64-dim embeddings, 4-head attention, and semantic memory retrieval, using only the standard library
- Built a **desktop GUI** with chat, training controls, memory stats, and JSON/CSV import/export for interactive agent training
- Implemented **cognitive architecture**: 32-item **STM**, cosine-similarity-based **LTM**, layer normalization, and residual connections for recursive reasoning

NLP Model Tuning for TellMeWhy Dataset

August 2024-December 2024

- **Fine-tuned** BERT/T5 for binary classification on why-questions(dataset evaluating casual reasoning)
- Used GPT with **Chain of Thought prompting** for reasoning tasks

Work Experience

AI Software Engineering Intern — Haydn (London-based fintech startup)

London / Remote (Korea)

April 2025 - June 2025

- Maintained and extended a **full-stack accounting app** generating automated Financial reports from transaction data
- **Integrated AI APIs** (Gemini and ChatGPT) to enhance natural language analysis
- Collaborated using Phoenix (Elixir), GraphQL, PostgreSQL, React, TypeScript, Apollo, and Cursor

Co-Founder — USFIM (Biotech startup for turfgrass growth solutions)

Seoul, South Korea

August 2022 - January 2024

- **Co-founded and led a biotech startup** developing eco-friendly bio-stimulation solutions for sustainable turfgrass growth
- **Drove end-to-end product development** through market research, technical analysis, and iterative prototyping
- **Secured \$80K in research funding via an MOU with Seoul National University**, enabling collaborative R&D on water-efficient turfgrass solutions
- Led cross-functional collaboration and strategic partnerships in biotech and sustainability sectors
